This research aims to answer a problem regarding how Is there a significant effect of the tiktok iapplication on istudent's speaking ability at SMPN 20 Bengkulu City. This research is a type of quantitative research. Based on the research results, the description of the data described in the results of this research has shown the application of the use of solar system media for class VII students at SMPN 20 Bengkulu City. Based on descriptive statistical analysis, the lowest pretest score was 50 and the highest was 90, while in the posttest the lowest score was 50 and the highest was 95. The average score (mean) of the pretest obtained was 63.3333 while the posttest was 76.8333. This shows that after implementing the Englishwithmovie account content on the TikTok application, the average student score increased compared to before using this learning model. For the results of inferential statistical analysis for hypothesis testing, the prerequisite analysis tests are first carried out. The prerequisite test carried out is the normality test. The results of the normality test show that the pretest and posttest data are normally distributed. The results of the prerequisite tests stated that the data was suitable for hypothesis testing. The results of hypothesis testing using Sig 2 tailed are more than 0.05, so  $H_a$  is accepted and  $H_o$  is rejected. and conversely, the Sig 2 tailed value is more than 0.05, then  $H_a$  is rejected and  $H_o$  is accepted. Based on the table above, it can be concluded that the Sig value ( $0.001 < 0.05$ ) means  $H_a$  is accepted and  $H_o$  is rejected

Penelitian ini bertujuan untuk menjawab permasalahan mengenai bagaimana adakah pengaruh signifikan penerapan tiktok terhadap kemampuan berbicara siswa di SMPN 20 Kota Bengkulu. Penelitian ini merupakan jenis penelitian kuantitatif. Berdasarkan hasil penelitian, uraian data yang diuraikan dalam hasil penelitian ini telah menunjukkan penerapan pemanfaatan media tata surya pada siswa kelas VII SMPN 20 Kota Bengkulu. Berdasarkan analisis statistik deskriptif diperoleh nilai pretest terendah sebesar 50 dan tertinggi sebesar 90, sedangkan pada posttest diperoleh nilai terendah sebesar 50 dan tertinggi sebesar 95. Nilai rata-rata (mean) pretest yang diperoleh sebesar 63,3333 sedangkan posttest sebesar 76,8333. Hal ini menunjukkan bahwa setelah penerapan konten akun Englishwithmovie pada aplikasi TikTok, rata-rata nilai siswa meningkat dibandingkan sebelum menggunakan model pembelajaran ini. Untuk hasil analisis statistik inferensial untuk pengujian hipotesis terlebih dahulu dilakukan uji prasyarat analisis. Uji prasyarat yang dilakukan adalah uji normalitas. Hasil uji normalitas menunjukkan data pretest dan posttest berdistribusi normal. Hasil uji prasyarat menyatakan bahwa data layak untuk diuji hipotesis. Hasil uji hipotesis dengan menggunakan Sig 2 tailed lebih dari 0,05 maka  $H_a$  diterima dan  $H_o$  ditolak. dan sebaliknya jika nilai Sig 2 tailed lebih dari 0,05 maka  $H_a$  ditolak dan  $H_o$  diterima. Berdasarkan tabel diatas dapat disimpulkan nilai Sig (0,001) < 0,05 berarti  $H_a$  diterima dan  $H_o$  ditolak
